**Park 510 - Artificial Turf Fields:
Soccer, Rugby, Football, and Two Baseball Fields**

Chicago Park District, **Park 510**, is located at Polk and Leavitt in Chicago. The Park consists of two parcels and is currently used for baseball and softball on the eastern parcel and passive space on the western parcel. GRAEF – USA was lead firm for preparation of 100% design documents and construction administration. Project scope of work includes: surveying and parcel acquisition, Leavitt Street closure, artificial turf fields (soccer, rugby, football practice, and two baseball fields with side wings and bleachers), a passive park on the western portion, sports field lighting, drainage, park amenities (drinking fountains, path lighting, and benches), and environmental remediation.

Delta Engineering Group was responsible for sports field lighting and path lighting of the passive park on the western parcel. Scope of work included preparation of lighting calculations, plans and details, foundation design, and specifications and quantities. Delta worked with the Chicago Park District to select high mast poles. The lighting design covers the entire east parcel (east of Leavitt) as one system since the new fields will be overlapping.
