Illinois State Toll Highway Authority

**Illinois State Toll Highway Authority
I-355 Extension**

The I-355 extension was a new tollway to connect the intersection from I-55 south to I-80. Delta Engineering was responsible for providing all electrical engineering services from North of 135th Street to South of 151st Street. This involved power distribution and lighting design for the roadway lighting for the tollway, and lighting for two new bridges at 143rd Street and Archer Avenue, which were constructed to pass over the tollway as part of this project. Work also involved coordination with utility companies to provide electrical service to lighting controllers at several locations.
