## **O'Hare International Airport American Airlines Parking Lot**

As part of the O'Hare Modernization Program a new North Air Traffic Control Tower was built on land that was part of the American Airlines' site. Delta Engineering Group, LLC designed a 477-space parking lot on approximately four acres of land for American Airlines employees. This was an "in-kind" replacement for land taken for the NATCT. An access road connecting to Hangar Road was designed for the ingress and egress. The project was closely coordinated with the North Airport Traffic Control Tower (NATCT) site development, and all the plans complied with standards set forth by FAA, OMP, IDOT, and the City of Chicago.
